Defn

Kobe Bryant marked his retirement from the NBA by scoring 60 points in his final game as a Los Angeles Laker on Wednesday, April 12, 2016. Drafted into the NBA at the age of 17, Kobe earned the sport’s highest accolades throughout his long career. Using 20 years of data on Kobe’s swishes and misses, can you predict which shots will find the bottom of the net? This competition is well suited for practicing classification basics, feature engineering, and time series analysis. Practice got Kobe an eight-figure contract and 5 championship rings. What will you get from it?

- Step One - Check the data ,Data cleaning,Data process
- Step Two - Data visualization
- Step Three - Build the model and select the optimal parameters
- Step Three - Visualization parameters and process the test data

■ There must be variables in so much data that have nothing to do with our model, and we will remove them in some way.

Data visualization

Data visualization
Check the data ,Data cleaning,Data process
Data visualization
Build the model
Conclusion

- After we delete blank data,we create charts to check the relationship between variable.

- We can make sure that the shooting position and latitude and longitude are basically consistent with the court.

Data visualization

- [Data visualization](#)
 - [Check the data ,Data cleaning,Data process](#)
 - [Data visualization](#)**
 - [Build the model](#)
 - [Conclusion](#)

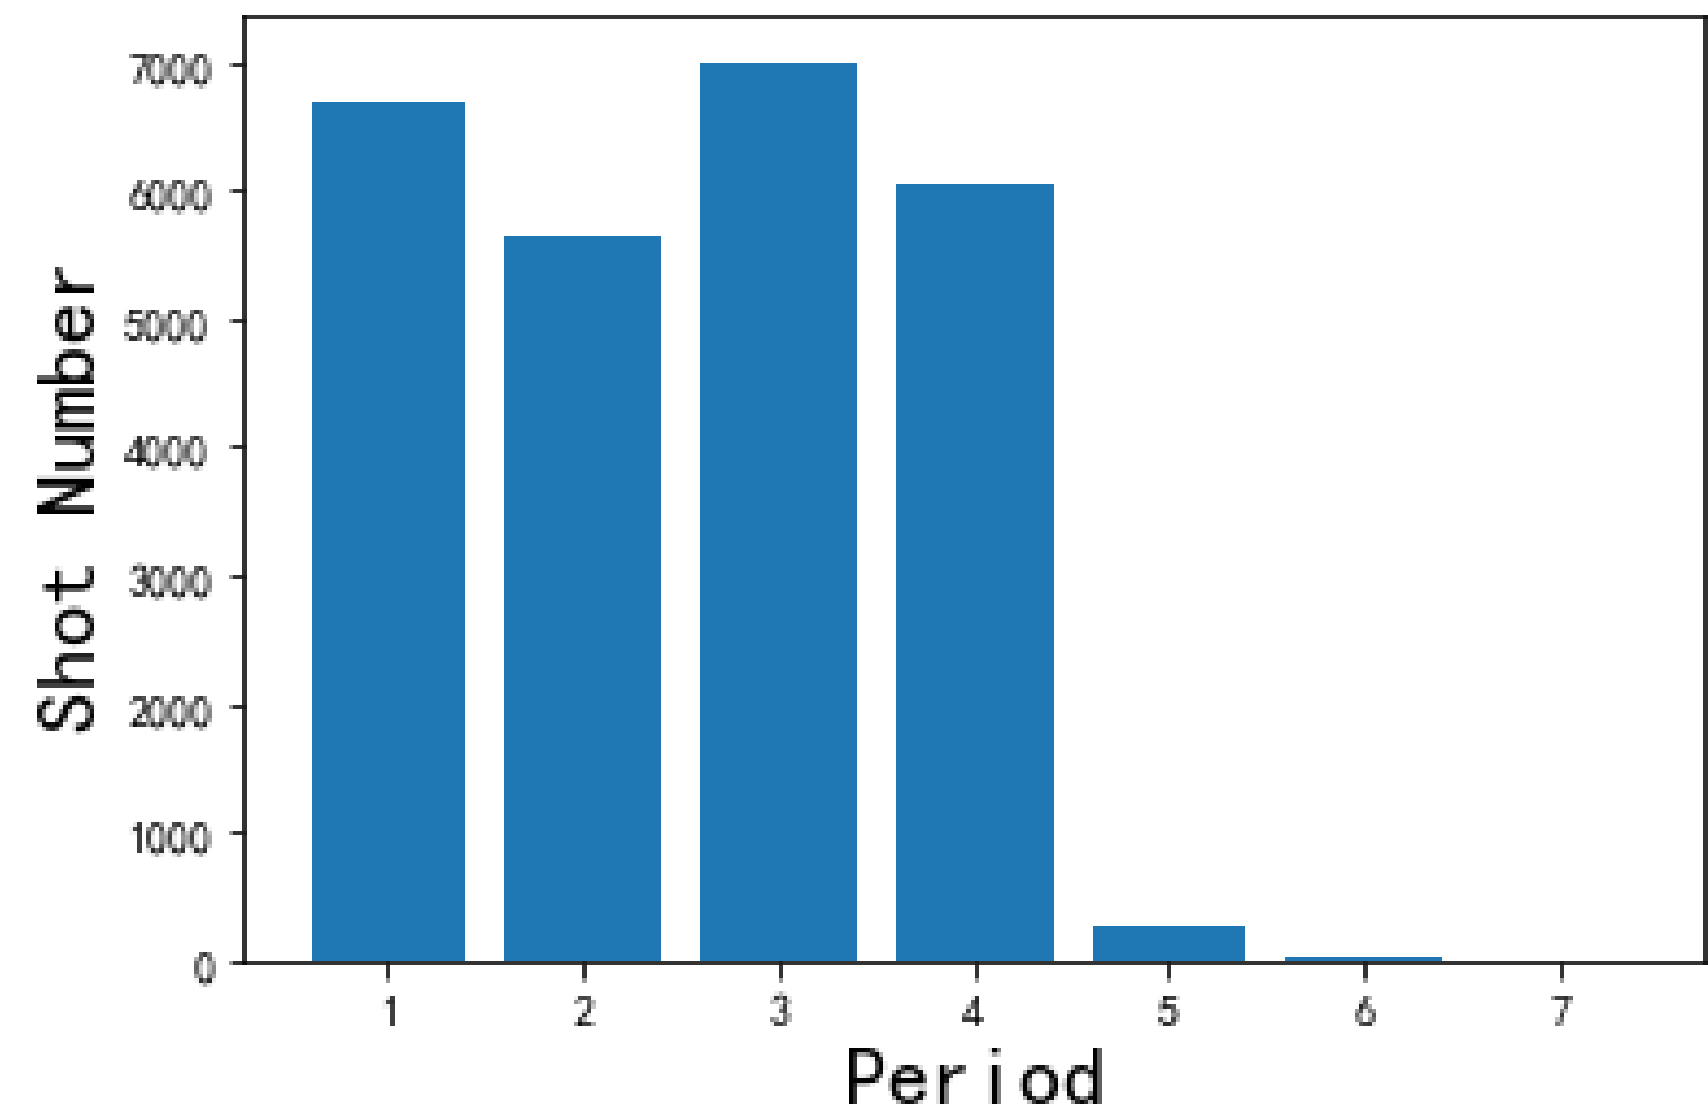

- From the shooting distance, most of Kobe is in the middle distance.

Data visualization

- Problem Definition
- Overall Research Ideas
- Data visualization
 - Check the data ,Data cleaning,Data process
 - Data visualization
 - Build the model
 - Conclusion

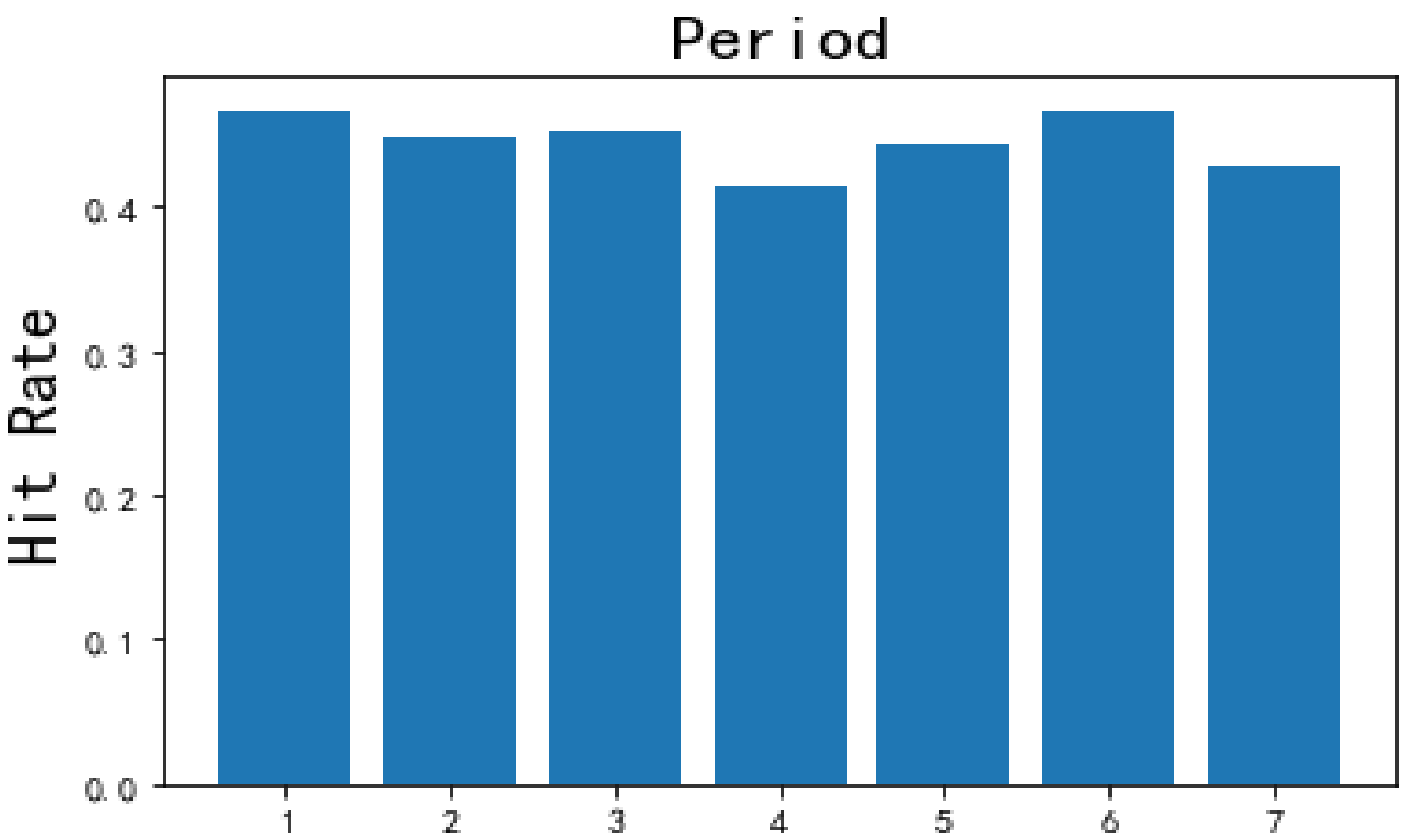

- Kobe’s shooting times in each quarter are the most in the third quarter and the second in the first quarter.
- Because the 5, 6 and 7 quarters are overtime games, naturally much less.

Data visualization

- Problem Definition
- Overall Research Ideas
- Data visualization
 - Check the data ,Data cleaning,Data process
 - Data visualization**
 - Build the model
 - Conclusion

- The shooting percentage of each section can be seen that Kobe’s shooting percentage is the lowest in the fourth quarter.
- It can be seen that physical strength has some influence on Kobe’s shooting percentage.

- [Build the model](#)
- [Build the model](#)**
Build and train the model and produce the submission data
- [Conclusion](#)

- We need to eliminate duplicate data before we build models.
- Encoded the data by one-hot.
- Choose the minimum value of loss and the number of optimal trees, the optimal value of maximum depth.

Build and train the model and produce the submission data

- During this past month I have learned how use Latex,git and so on. There is no doubt that I have encountered a lot of problems in this short time. and it exercise my ability to learn independently.
- After a month of study in flip00,I have benifit quite a lot. I not only learned how to use software,but also gained friends.

Thanks For Your Listening
